

Gleb Arestov, **Principal Frontend Engineer**
Experience: **15 years**, Age: 35 years
e-mail: gleb.arestov@gmail.com
Location: Batumi, Georgia (GMT+3),
📍 Buenos Aires, Argentina (GMT-3; PST+5; EST+1)

Intro

I've worked at 3 startups. I built a lot of things from ground (as **1st engineer at 2 startups** and as founder of indie hacker projects).

I'm really good at frontend apps that look & feel like desktop (web, electron, chrome extensions). Can make backend & CI to build & test from ground though.

90s speedrun video cv over my 14 years experience: https://youtu.be/T4NBv_8wYPs (frontend part only)

Impressive accomplishment

- 👤 Browser for work meetsidekick.com, (1st engineer)
 - 🏆 #1 Product of the Day on Product Hunt (2020, Sidekick Browser).
 - 🏆 #1 Product of the Week on Product Hunt (2020, Sidekick Browser).
- 👤 Music app seesu.me (founder, hobby project; combines last.fm, soundcloud.com, hypem.com, discogs.com, etc)
 - 🏆 Tizen App Challenge - 2014
 - 🏆 Chrome Apps contest of Google technology User Group - 2010
 - 🏆 Opera Widgets Challenge - 2010
 - 👤 Prototype of integration with apps platform utorrent (download & listen from torrents)
 - 👤 Prototype of electron app with webtorrents lib (listen stream from files inside torrent)
- 👤 Marathon visualization (Runners density graph along curve path)
- 😄 (Fun fact) I got \$50 amazon gift card from BitTorrent company. For unpurposely sharing know-how to play mp3/video inside IE6/IE7 engine. BitTorrent used that to monetize utorrent app (which has millions of users)
- ⚡ Found & highlighted memory leaks, suggest performance improvements to open source torrent protocol library
 - 🔗 github.com/webtorrent/webtorrent/pull/382/files
 - 🔗 github.com/webtorrent/webtorrent/issues/712#issuecomment-204273562
 - 🔗 github.com/webtorrent/webtorrent/issues/115

Experience

2022 Founder, Indie Hacker
2019 · 2021 Principal Engineer
2018 · 2019 Lead Developer
2018 Lead Frontend Developer / Backend Developer
2016 · 2018 Frontend Developer / Backend Developer
2014 · 2016 Lead Node.js Developer
2013 Frontend Developer
2011 · 2012 Frontend Developer
2010 · 2011 Frontend Developer
2009 · 2010 Junior Frontend Developer
2008 Junior Frontend Developer

Tech

Notable tech applying and limitations bypassing to make product

Linkkraft, Browser to be effective researcher & collector

History tree visualization

Offline snapshots

State persistence

2d Canvas, Electron API (as input)

Electron Content Scripts, Chrome Dev Tools Protocol

LevelDB to save in-memory graph to disk

Sidekick, Browser for work

Performance of early prototype (fork of Electron app)

CI to build & test Electron app

Quick migration from Electron app to Chrome Extension (As part of moving from Electron to own Chrome fork)

CI to build & test Chrome extension

History text search (Chrome history is not suited for Sidekick case)

Documents detection & global search

Adblocker

Live Sync for team workspace

Redesign architecture to

1. Use Electron Main/Render process & code separation
2. Use BrowserView instead of <webview>

Have prepared architecture

Chrome Extensions API, IndexedDB, Web Worker, performance profiling

Extensions API Content Scripts, JSON with declaration, messaging, IndexedDB

Chrome Extensions API, RegExp

Web Sockets (Pusher.js), Web Worker

TruckerPath, most popular map app for truckers

Payment info receiving automation

Lint Clojure code (CI)

Backup PostgreSQL (CI)

Clojure/PostgreSQL. Bolt webhooks, Salesforce API

Python

Python, AWS

Seesu

Play music inside Opera Widgets / Chrome extensions sandbox (No HTML5 audio, flash limitation)

Background playback & live sync for popup. (Popup is alive only when open)

Fast rendering of Chrome Extensions popup (Limitations: Popup is alive only when open; when React is not created yet)

Allow to stream/play music from torrents

Flash API, iframe messaging

State separation, message incremental changes of in-memory graph to popup, performance profiling

Transform incremental changes of graph state to DOM atomic changes, performance profiling

Btdigg.com, Electron, WebTorrents library, Node.js streams (pipe stream of file inside torrent from node.js part of electron to http request/response stream so chrome part of electron can play it)

EuroChem

Provide near live updates for reporting system. Replace heavy (run once in day) SQL view by incremental updates

Fast download for big dumps of data

Node.js, MySQL. Hooks & dependency tracking inside proprietary MySQL driver. So, as soon someone commits changes to DB, we can track what dependency we should update & update it. Without need to rebuild whole report. (Hasura.io, but in 2015)

Node.js. Stream response of request (to Oracle db) to excel stream generating lib. User downloads file as soon as data received from DB.

Marathon visualization

Show dynamic of marathon in time

JavaScript, SVG, performance profiling

Mamba

Provide live updates; Save costs for expensive live connections. (Limitations: IE still a thing, Shared Web workers is not stable yet at that time)

Lib to share 1 long polling XHR across multiple tabs. Flash API,

Linkkraft, Browser to be effective researcher & collector

The screenshot shows the Linkkraft browser interface. On the left, a sidebar lists various links with their domains and user avatars. The main content area displays a tweet from @levelsio, which includes a video of a dog and text overlays. Below the tweet, there is a list of links and a summary of the user's profile statistics.
